Preserving the variety in the Ötztal!

Dry stone or collected field stone walls shape the Ötztal's cultural landscape in a particular way. They have great ecological value as they offer an important habitat to countless insects, vertebrates and plants. Many walls within the Nature Park are already decaying and urgently need to be repaired. In this workshop you will learn how to build a dry-stone wall properly. The knowledge acquired and the practical experience are extremely valuable for the ecological design of your own garden.

We look forward to your precious help 😊!
